REO achieve highest IP protection class (International Protection)

With components up to IP67

Electrical equipment is often required to work safely and reliably for many years under the most difficult conditions. In industry often aggressive substances - for example fuels, vapours and bases - are used and it is necessary to ensure that electronic devices work properly there too. In addition, the ingress of dust and water must be prevented.

The parameters give the user information about the usability of electrical equipment in certain environments. Furthermore the parameters tell us about the protection for people.

The degrees of protection are divided into IP ratings. The two following parameters to "IP" provide information about the environments in which the device can be used. These codes are defined in the standard IEC 529 (DIN EN 60529 / VDE 0470, T1).

The IP65/66 devices from REO can be used outside of the cabinet next to the frequency converter. Due to its special structure, the components are protected from dust and moisture. Required EMC specifications are achieved by the use of shorter cable lengths. The resulting increase of energy efficiency also reduces operating costs.

REO solutions are easy to install and user-friendly. They are particularly suitable for applications such as pumps, fans, conveyors, cranes, hoists, compressors and lifts.

REO Advantages

- The special design ensures external mounting outside of the inverter without the need for an additional enclosure
- Particularly robust
- Protection from dust, liquids and slurries
- EMC Filters with special design provide corrosion - and salt water protection
- Very good heat dissipation
- Worldwide production facilities and sales offices

High heat dissipation

High splash wa

Water protection

High dust protection

REO system components

With high protection IP ratings for inverters

IP Protection class – Explanation

Below is a list of the classification of degrees of protection IP according to DIN EN 60529. The first parameter after IP has the meaning of protection against contact and foreign bodies and the second parameter describes the scope of protection against moisture and water.

1. Parameter: Protection against contact and foreign bodies

0		No protection
1		Large foreign bodies (diameter from 50 mm upwards)
2		Medium foreign bodies (diameter from 12,5 mm upwards, Length up to 80 mm)
3		Small foreign bodies (diameter from 2,5 mm upwards)
4		Grain-shaped foreign bodies (diameter from 1mm upwards)
5		Ingress of dust is not entirely prevented
6		No ingress of dust

2. Parameter: Protection against water

0		No protection
1		Protection against dripping water (vertically falling drops)
2		Protection against oblique (up to 15°) falling water
3		Protection against Water falling as a spray at any angle up to 60° from the vertical
4		Protection against splash water from all sides
5		Protection against water coming from a nozzle
6		Protection against powerfull water coming from a nozzle (Flooding)
7		Protection against temporary immersion
8		Protection against permanent immersion
9		Protection against water during high pressure cleaning and Steam jet cleaning (applies only to road vehicles)

Usual types of protection in practice

Common industrial systems in closed factories generally require IP20 protection. Here the protection IP54 (splash-proof + Dust-proof) is becoming more common. Outdoor systems

need protection to IP65 / 66 (Dustproof + watersplash safe). Protection \leq IP40 only offers protection against contact and is only useful when the system is installed in an enclosure.

IP protection class – Typical Applications

The need for accessories for frequency converters with high protection is rapidly increasing. As frequency converters are being used in more applications and in more aggressive environments. The market is demanding these types of protection systems and REO offers a wide range of standard

products in aluminium profile: chokes (motor chokes, output chokes, sinusoidal filters) in encapsulated versions as the CNW M, EMC filters (CNW) and resistors (REOHM). The manufacturers of frequency converters now offer devices up to IP66.

Advantages

The advantage of using high IP rated products is that a cost saving is made, as an expensive enclosure is no longer necessary.

Highest IP protection class IP66

For REO chokes

To receive such a high protection class for chokes, REO has developed the patented encapsulation. With the combination of the completely protected terminal box, the equipment could be placed outside of the frequency converter. Therefore the additional costs of switch cabinets can be saved.

Three-phase mains chokes 4 % Uk Protection class up to IP66

(3 x 500 V) (3 A- 36 A), CNW M 903 / IP

Advantages

- Compact encapsulated unit
- Optimal mechanical protection of the choke
- Lower surface temperature
- Easy connection
- Low noise

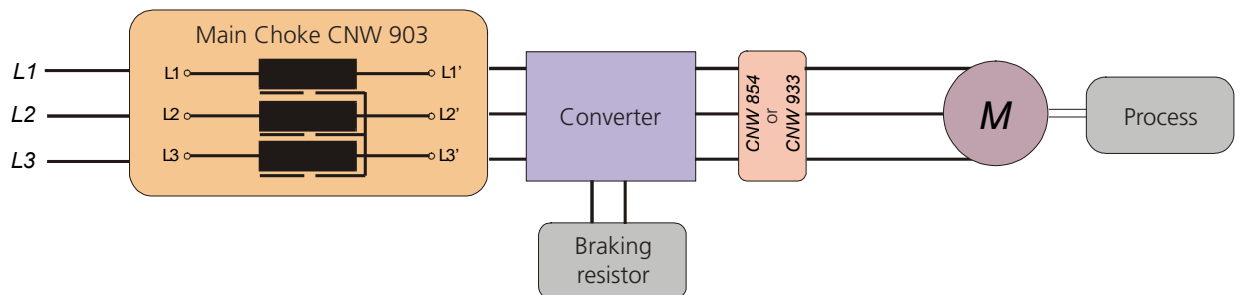

Technical data

Three-phase mains chokes 4 % Uk*						
Type	Rated voltage [V]	Rated current [A]	Uk	Inductance [mH]	Copper weight [kg]	Total weight [kg]
CNW M 903 / 8 / IP	up to 3 x 500 V	8	4%	3,6	1,0	2,4
CNW M 903 / 16 / IP		16	4%	1,8	1,6	4,6
CNW M 903 / 36 / IP		36	4%	0,81	2,5	6,6

Applications: Used on the input side of the inverter, reduction of harmonics and reduction of commutation losses, Test voltage L-L 2100 V, DC 1 s, L-PE 2700 V, DC 1s, Overload $1,5 \times I_{Nenn}$ 1 min / h, Climatic category DIN IEC 60068-1

Circuit example

du/dt-Filter Protection class up to IP66

(3x400V) (8-180A) CNW M 833/IP

Advantages

- Low leakage current to the motor
- Optimal mechanical protection of the choke
- Low noise
- Easy connection
- Lower surface temperature

Technical data

du/dt-Filter*					
Type	Rated voltage [V]	Rated current [A]	Inductance [mH]	Capacity [pF]	Total weight [kg]
CNW M 833 / 8 / 2 / IP	3 x 400 V ≤ 60 Hz	8	2	330	3,3
CNW M 833 / 16 / 0,9 / IP		16	0,9	330	4,5
CNW M 833 / 36 / 0,42 / IP		36	0,42	1500	9

Applications: The dv/dt filter is used to reduce the voltage slew rate at the drive, for increased motor life by reducing the voltage peaks: Test voltage 2500 Vdc, Climatic category DIN IEC 60068-1

All chokes (CNW M 833 und CNW M 933) are available up to 180 A - just contact us.

Circuit example

*The given values are only an extract of the standard sizes

Motor chokes Protection class up to IP66

(3 x 500V) (2A - 36A) CNW M 854 / IP

Advantages

- Compact encapsulated unit
- Optimal mechanical protection of the choke
- Low noise
- Easy connection
- Lower surface temperature

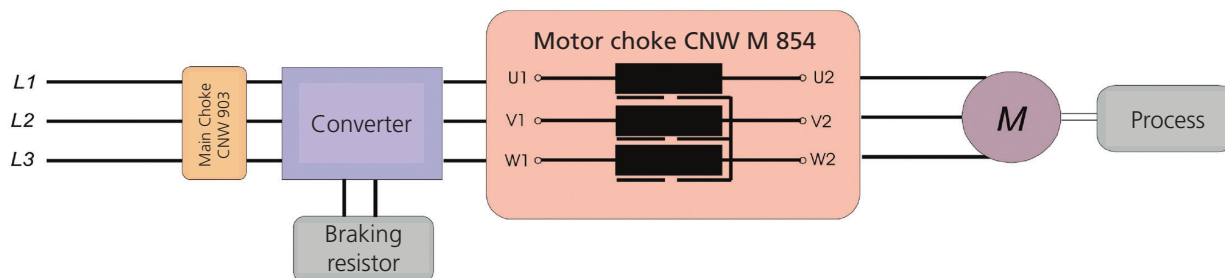

Technical data

Motor chokes*					
Type	Rated voltage [V]	Rated current [A]	Inductance [mH]	Copper weight [kg]	Total weight [kg]
CNW M 854 / 8 / IP	bis 3 x 500 V	8	2,0	0,5	1,7
CNW M 854 / 16 / IP		16	0,9	1,1	3,2
CNW M 854 / 36 / IP		36	0,4	2,1	6,6

Applications: Increased motor life Reduction of dv/dt to earth and between the phases Reduction of motor noise: Test voltage L-L 2100 V, DC 1 s; L-PE 2700 V, DC 1s, Overload $1,5 \times I_{Nenn}$ 1 min / h, Climatic category DIN IEC 60068-1

Circuit example

Sinusoidal filter Protection class up to IP66

(3 x 500 V) (2 A – 37 A) CNW M 933 / IP

Advantages

- Use in demanding environments
- Optimal mechanical protection of the choke
- Easy connection
- Lower surface temperature

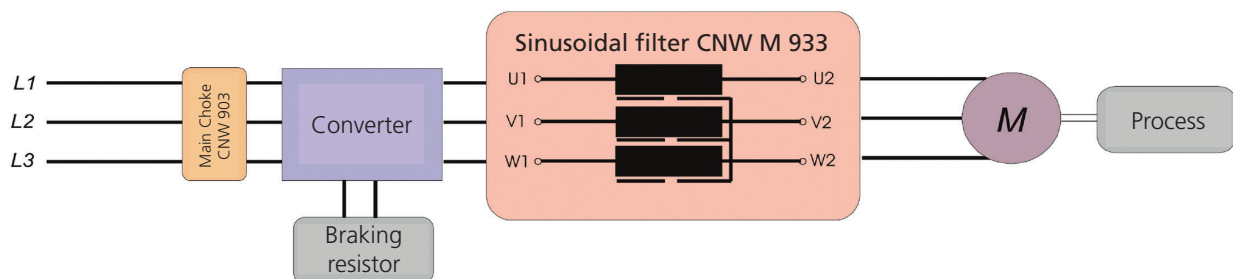

Technical data

Sinusoidal filter					
Type	Rated voltage [V]	Rated current [A]	U _k	Inductance [mH]	Copper weight [kg]
CNW M 933 / 8 / IP	bis 3 x 500 V	8	7,3	0,73	3,7
CNW M 933 / 16 / IP		16	3,6	1,1	9,2
CNW M 933 / 36 / IP		36	1,6	3,3	28,8
CNW M 933 / 48 / 1,2 / IP	3 x 400 V ≤ 60 Hz	48	1,2	10	32
CNW M 933 / 60 / 0,9 / IP		60	0,9	20	32,5
CNW M 933 / 90 / 0,65 / IP		90	0,65	25	55
CNW M 933 / 175 / 0,3 / IP		175	0,3	120	115

Applications: The output current and voltage on a frequency converter are converted into a sine-wave, suitable for long motor cable runs, increased motor life, reduction of noise, test voltage L-L 2100 V, DC 1 s, L-PE 2700 V, DC 1s, Overload 1,5 x I_{Nenn} 1 min / h, Climatic category DIN IEC 60068-1

Circuit example

High protection classes up to IP66

for REO Braking resistors

The protection describes the specific environment for electrical equipment. Especially in aggressive environments, climates with high temperature variations or other severe climatic conditions, using products with a high protection class is essential. The profile resistors of the REOhm series BW 150 with high protection class are especially suitable for aggressive environments, like marine applications or in railway technology. Another large application is the wind power technology - there you can use the resistors for azimuth-drives or pitch systems.

These components can be mounted externally and are protected against external environmental issues. Often the components are mounted outside the switching cabinet - therefore it is a requirement to select a resistor with a high protection class. REO understand this philosophy and have a large standard range of inductors (CNW M), EMC filters (CNW) and resistors (BW).

Protection classes of REO compact resistors

Depending on the location and the environment, different protection classes are required. For the protection class \leq IP40 the temperature rise at the hottest point of the surface resistance is a maximum of 300K. For higher protection classes ($>$ IP40) a maximum of 200K at the hottest point of the surface resistance is permitted.

Attention!!! Continuous high temperature of $>$ 200 K leads to a reduction of ingress protection.

Additional temperature protection

It is possible to monitor the temperature of the resistor with a temperature switch. When exceeding a nominal temperature the temperature switch opens and triggers an alarm contact. The temperature switch is mounted externally for IP20 / IP40 versions and fitted with 2 wires ready for connection.

In a protection class IP54 / IP65 or higher, the temperature switch is integrated in the resistance and provides the connection for an external monitoring system.

Protection classes			
Protection class	Setting	Series	
		155	156
IP65 / IP66		X	X
IP65 / IP66 or higher with temperature switch		X	X

Useful facts about REOhm resistors

If installed on a non or poor heat-conducting material, the performance must be checked due to the reduced heat dissipation. When mounting vertically, it is essential to ensure that the connections or terminals are located on the underside of the resistor. An installation which has the connections on the uppermost side is not allowed! If several resistors are mounted one above the other, mutual interference must be taken into account. Here the compliance with the above mentioned ambient conditions must be observed and the

installation conditions checked on site. When mounted directly on a heat sink or cooling surface, the continuous power of the resistor can be increased or the surface temperature reduced. Depending on the type and size of the cooling surface / heat sink, the output can be increased by a factor of 1.5 - 4. However, this must be checked in individual cases, whereby the specified ambient conditions still apply.

Attention!
Mutual interference

Incorrect
Connection on top

Correct
Bottom connection

Power increase by factor 1.5 - 4 possible

Useful facts about REOhm resistors

Calculation of continuous power

If the kinetic energy E_{kin} emitted to the braking resistor during braking is known, the continuous power can be determined directly from the amount of energy and the cycle time.

$$P = E_{kin.} / SD$$

P = Continuous power
 $E_{kin.}$ = Kinetic energy
 SD = Cycle time

If the kinetic energy is not known, the duty cycle ED and the cycle time SD are required.

$$ED[\%] = \frac{ED[s]}{SD[s]} \cdot 100$$

ED = Duty cycle
 SD = Cycle time

The continuous power for a duty cycle of 10% can be calculated as follows:

$$P = P_{max} \times 10\%$$

At a duty cycle of 50% the result is:

$$P = P_{max} \times 50\%$$

The continuous power (P) is therefore smaller than the maximum pulse power (P_{max}) by a corresponding factor. The calculations at REO refer to intermittent braking at a cycle time of 120 seconds.

Due to their special wound construction and heat conductive insulating material, REOhm braking resistors ensure that the heat can be quickly transported to the surface during pauses, which allows the heat to dissipate over a longer period of time. However, due to the rapid cooling of the winding, pulses can always be absorbed without compromising safety or the resistors performance. The REOhm braking resistors of the standard series are designed for a duty cycle of 5% -100%. Smaller duty cycles are also possible on request.

Load diagram for air-cooled resistors

SD = Cycle time max . 120 sek
 ED = Duty cycle

REOhm Series BW 15X

In industry, the resistors have to work safely for many years under difficult environmental conditions. In addition to the permissible temperature range, the environmental conditions i.e. resistance to common railway pollutants such as vapours, gases, coal dust, oil or brake abrasion, represents a restriction of use. In addition, the penetration of moisture and foreign bodies, such as dust, must be prevented for reliable operation.

Advantages:

The REOhm resistors of the BW 15X series are characterized by high functional reliability and a long service life. Due to their special design, REOhm resistors offer very high mechanical protection and are not susceptible to vibrations and oscillations. Due to this design, the resistor can absorb higher pulse loads and dissipate them effectively. External environmental influences have very little effect on the resistor, i.e. they are less sensitive to moisture and dirt. Profile resistors emit low levels of audible noise.

Resistor value / temperature dependence

The resistor value changes slightly depending on the winding temperature. This results in resistor changes of approx. +10% compared to the cooled state.

The performance data in the data sheets apply under the following operating conditions:

- Maximum ambient temperature 40°C
- Unimpeded air flow to ensure cooling
- If the ambient temperature is higher than 40°C, the continuous power must be reduced by 5% per 10K temperature increase.

The resistors are short-circuit proof and self-extinguishing. (All series except REOhm R)

The resistors are designed to convert electrical energy into heat, so heating of the vicinity and adjacent housing parts is unavoidable. It must be ensured that the cooling air flows in and out freely and that sufficient heat is dissipated via cooling surfaces.

Protection classes

Depending on the design and construction, different degrees of protection can be provided. For protection class \leq IP20 the temperature increase at the hottest point of the resistor surface must not exceed 300K. For a higher degree of protection ($>$ IP20), a maximum temperature increase of 200K applies at the hottest point of the resistor surface.

Overheating Protection

It is possible to monitor the temperature of the resistor with a temperature switch. When a nominal temperature is exceeded, the temperature switch opens and triggers a signalling contact. The temperature switch is equipped with two cables ready for connection.

Operating conditions

REOhm Series BW 15X	
Ambient temperature	-15 °C ... +70°C Operating, storage and transport temperature Over 40°C Reduce continuous power Pd by 5% 10K
Max. relative humidity 5-85% non-condensing during operation	
Installation altitude	0 ... 4000m üNN over 1000m Reduce continuous power Pd by 5% / 1000m
Installation place	The installation site must correspond to the device characteristics specified in the „General data“. Flammable materials or substances must not be in the vicinity of the braking resistor. The heat generated by the braking resistor must be dissipated unhindered.
Mounting position	Vertically suspended with connections at the bottom or horizontal mounting
Installation clearances	Top > 200 mm Below > 100 mm Lateral > 25 mm

General data

REOhm Series BW 15X	
Conformity	CE low voltage directional
Temperature switches	Normally closed version, 200 °C
Switching capacity	250 V AC / 0,5 A
Insulation resistance > 5 MΩ /bei 1000 V	

Compact Braking resistor

BW 155 Protection class IP65 / IP66

BW 155/600 - 2500 W/xx

Advantages

- Small dimensions at high output
- Fast connection
- Short-circuit proof
- Very good heat dissipation
- High-resistance at overload
- Options available with terminal covers and temperature switches
- Installation also possible outside the control cabinet

Compact Braking resistor

BWD 158 Protection class IP65 / IP66

BW D 158/1000 - 60.000 W/xx

Advantages

- Very compact construction
- Use also possible at higher ambient temperatures
- Optimised cooling for high ratings
- Very low enclosure overtemperature (<50°C)
- Suitable for standard cooling fluids (water/glycol)
- high protection class up to IP66
- Operating pressure of the cooling circuit up to 4bar (test pressure 10bar)
- Needs very little space in the control cabinet

Compact Braking resistor BWD 158

Compact Braking resistor

BW D 330 Protection class IP67

BW D 330/15.000 - 60.000 W/xx

Liquid-cooled braking resistor,
max continuous output: 60.000 W

The REO braking resistor converts excess braking energy into useful heat and is thus ideally suitable for electrical or hybrid drives. The water cooling makes an additional space saving of up to 88% possible as compared to a traditional air-cooled braking resistor. As an extra feature, the resistor can easily be connected with drip-free quick fasteners.

Advantages

- 88% space saving
- Non-drip quick-release connectors
- Liquid Cooling
- Low weight
- Low surface temperature

Compact Braking resistor BW D 330

Technical data

Compact Braking resistor BW D 330			
Type	Resistance values [Ohm]*	Continuous output [W]	Operating voltage [V]
BW D 330 / 15.000	4,2 - 43,5	15000	800
BW D 330 / 30.000	2,1 - 21,5	30000	
BW D 330 / 45.000	1,4 - 14,5	45000	
BW D 330 / 60.000	1,6 - 11	60000	

Applications: Electric mobility, hybrid vehicles, wind power, industrial applications

Applicable standards

Applicable standards	
Standards	Explanation
DIN IEC 68 Teil 1 und 2 - 6	Environmental testing
IEC 60322 (DIN EN 60322)	Railway applications – Electric equipment for rolling stock– Rules for power resistors of open construction
IEC 61373	Railway applications – Rolling stock equipment – Shock and vibration tests
DIN EN 61373	Railway applications – Rolling stock equipment – Shock and vibration tests
DIN WDE 0160 und VDE 0535	Electronic equipment for use in power installations
DIN EN 50124	Railway applications – Insulation coordination – Part 1: Basic requirements; Clearances and creepage distances for all electrical and electronic equipment
DIN EN 50125-1	Railway applications - Environmental conditions for equipment – Part 1: Equipment on board rolling stock
DIN EN 50155 BN411002	Railway applications - Electronic equipment used on rolling stock
DIN EN 60068	Environmental testing– Part 2: Tests – Test group A: Coldness
DIN EN 60068	Environmental testing– Part 2: Tests – Test group B: Dry heat
DIN EN 60068	Environmental testing– Part 2: Tests – Testing Ka: Salt spray
DIN EN 60068	Environmental testing– Part 2: Tests – Testing Db: Moist heat, cyclical
DIN EN 60529	Degrees of protection provided by enclosures (IP code)
DIN EN 61140	Protection against electrical shocks
EN 60721-3-5	Classification of environmental conditions – Classification of groups of environmental parameters and their severities. – Ground vehicle installations
